(57) Abstract :

The present invention relates to a user-friendly web application called the E-Waste Facility Locator which helps people dispose of electronic waste responsibly through recycling. The system employs geolocation technology to help users find local recycling centers while supplying operational details and accepted e-waste categories. Users receive practical location details alongside environmental education about e-waste while earning credits for recycling valuable materials through the platform's rewards system. The platform seeks to advance sustainable electronic waste disposal methods through enhanced access and educational outreach to improve e-waste management which contributes to environmental cleanliness.
